

RESOURCE ACTION PROGRAM – WATERWISE

The Post Oak Savannah WaterWise Program is a school-based education program designed to generate immediate and long term water savings by bringing interactive, real-world education to students and their families. It is designed for 4th grade classes located in Milam or Burleson County. All of our program's material support state academic standards to allow the program to fit easily into your classroom curriculum and requirements. As a teacher, you will have access to the Teacher Book & Lesson Plan. Information is given to guide lessons throughout the program in order to satisfy each student's individual needs, whether they are visual, auditory, or kinesthetic learners.

Students receive a take home kit, which includes a WaterWise kit and Student Workbook. The WaterWise kit includes high efficiency measures they use to install within their homes. With the help of their guardians, students install the kit measures and complete a home survey. The act of installing and monitoring new water and energy efficiency devices in their homes allows students to put their learning into practice. They the students can realize actual water and energy savings within their home benefitting two generations.

A critical element of the Resource Action Program design is the use of new knowledge through reporting. At the end, POSGCD tabulates all participant responses – including home survey information, teacher responses, student letters, and parent feedback – and generates a Program Summary Report.
