

District Monitoring Wells - Shallow (<400) Management Zone

This map illustrates the wells in the District's Monitoring Network that are identified to be in the shallow management zone set for 400 feet. The District makes an effort to make management decisions that are supported through best available science. In an effort to improve this science, more wells are needed to increase the quantity and quality of data. While the Carrizo-Wilcox has been prioritized, there is a strong need for some shift towards the minor aquifers in regards to number of shallow monitoring wells. This document is for DRAFT ONLY.

Legend

Monitor Wells <400

- Carrizo-Wilcox
 - Queen City
 - Sparta
 - Yegua - Jackson
-
- Carrizo-Wilcox Outcrop
 - Queen City Outcrop
 - Sparta Outcrop
 - Yegua-Jackson Outcrop

Getting More Monitoring Wells

How are we planning to add new wells?

- Keep grinding!
 - Continue getting on the road visiting with people and inviting people to join.
 - Continue O&G well conversions (good for deep wells)
- Drill Baby, Drill!
 - County Road Right-of-Way (1 location in Milam CO)
 - Agreement Terms with Landowners
- Incentivize!
 - Again, Drill on private land
 - Possible Cost-Share of WellIntel or In-Situ monitoring equipment
