Mr. Gary Westbrook, General Manager  
Post Oak Savannah Groundwater Conservation District  
P. O. Box 92  
Milano, Texas 76556

**RE: SLR Property I, LP – Application for Temporary Rig Supply Wells**

Dear Mr. Westbrook:

SLR Property I, LP ("SLR") hereby submits copies of its applications for permits to drill ten(10) temporary rig supply wells for use during construction of permanent production wells approved under Operating Permit O148.

SLR requests that the POSGCD waive the requirement of a public hearing for these applications since these wells will only be of a temporary nature and will be utilized solely for supplying water to drill production wells already approved by the district. The proposed rig supply wells will only be used as a temporary water source for water well drilling operations associated with well construction under the approved Operating Permit 0148.

Upon completion of production well construction, the wells will be plugged according to State of Texas Public Water System and Post Oak Savannah Groundwater Regulations, or alternatively will be converted to long-term monitoring wells to assist with District monitoring requirements.

Enclosed is a check in the amount of one thousand dollars (\$1,000) for the District's processing of these applications.

Thank you for your consideration of SLR's applications. Please let me know if you have any questions or need additional information.

Mr. Gary Westbrook  
Post Oak Savannah Groundwater Conservation District  
May 31, 2022

**Response to Rule 4.1 – Well Spacing Requirement**

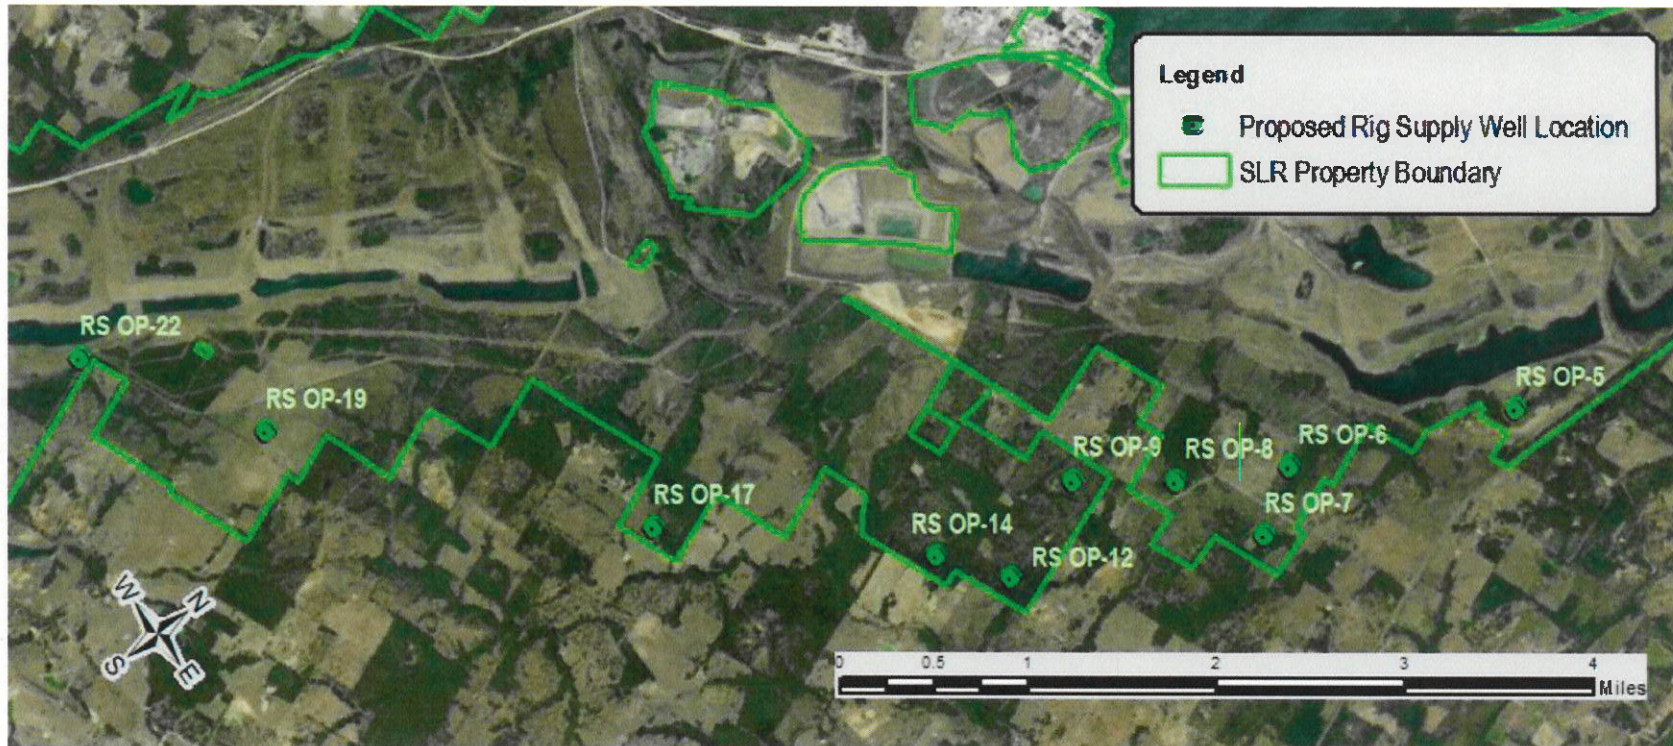

The rig supply well is a temporary use well that is to be located directly adjacent the production well approved under Operating Permit 0148. The maximum pumping rate for the rig supply well is 100 gpm. Based on field surveys of the Production Well Location, no wells currently exist within 250 feet of the proposed rig supply well. The rig supply well is located more than 250 feet from the SLR property boundary, and for reference the permanent production well meets all POSGCD spacing requirements and is permitted for an instantaneous maximum rate of 1,000 gpm. The rig supply well location will be selected near the approved production well location based on the footprint of the drilling rig and other equipment, and logistics of site access and drilling operations.

**Well Closure Plan**

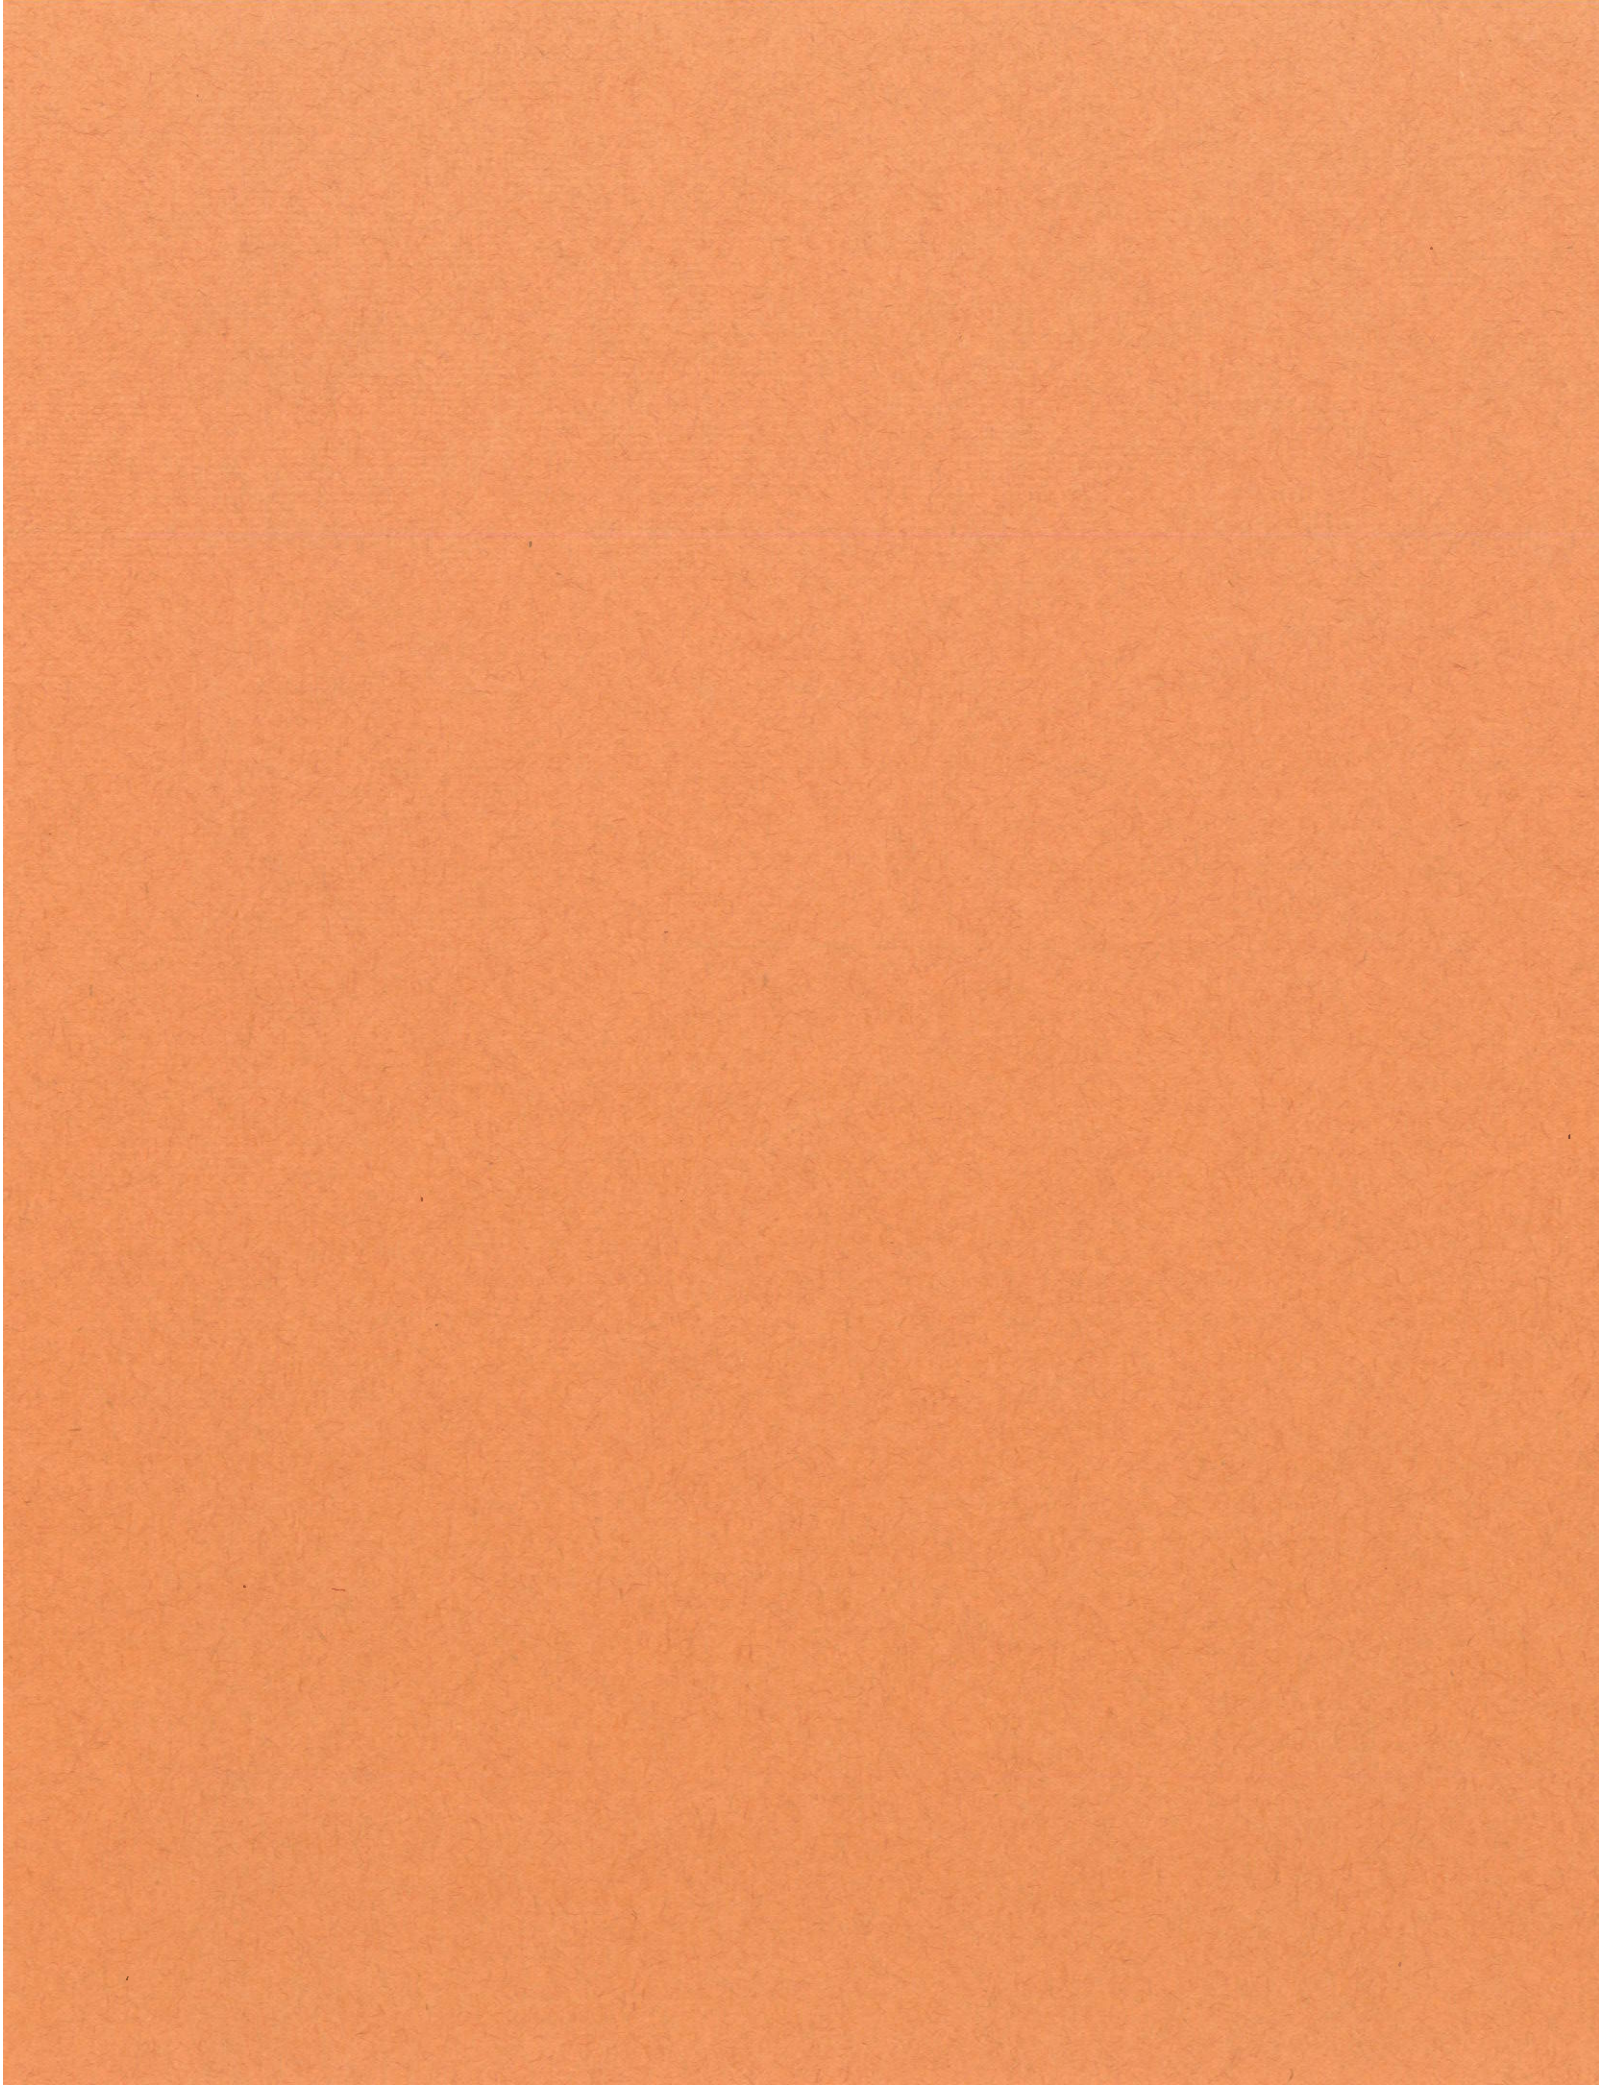

The temporary pumping equipment in the rig supply well will be removed upon completion of the permanent production well, and prior to installation of permanent pumping equipment in the approved production well.

The rig supply well closure plan is either rig supply well will be plugged in accordance with POSGCD and State of Texas requirements, or the monitoring program associated with SLR's Operating Permit 0148 will be amended to add the rig supply well as a new, long-term monitoring well.

**Response to Rule 4.1 – Well Spacing Requirement**

The rig supply well is a temporary use well that is to be located directly adjacent the production well approved under Operating Permit 0148. The maximum pumping rate for the rig supply well is 100 gpm. Based on field surveys of the Production Well Location, no wells currently exist within 250 feet of the proposed rig supply well. The rig supply well is located more than 250 feet from the SLR property boundary, and for reference the permanent production well meets all POSGCD spacing requirements and is permitted for an instantaneous maximum rate of 1,000 gpm. The rig supply well location will be selected near the approved production well location based on the footprint of the drilling rig and other equipment, and logistics of site access and drilling operations.

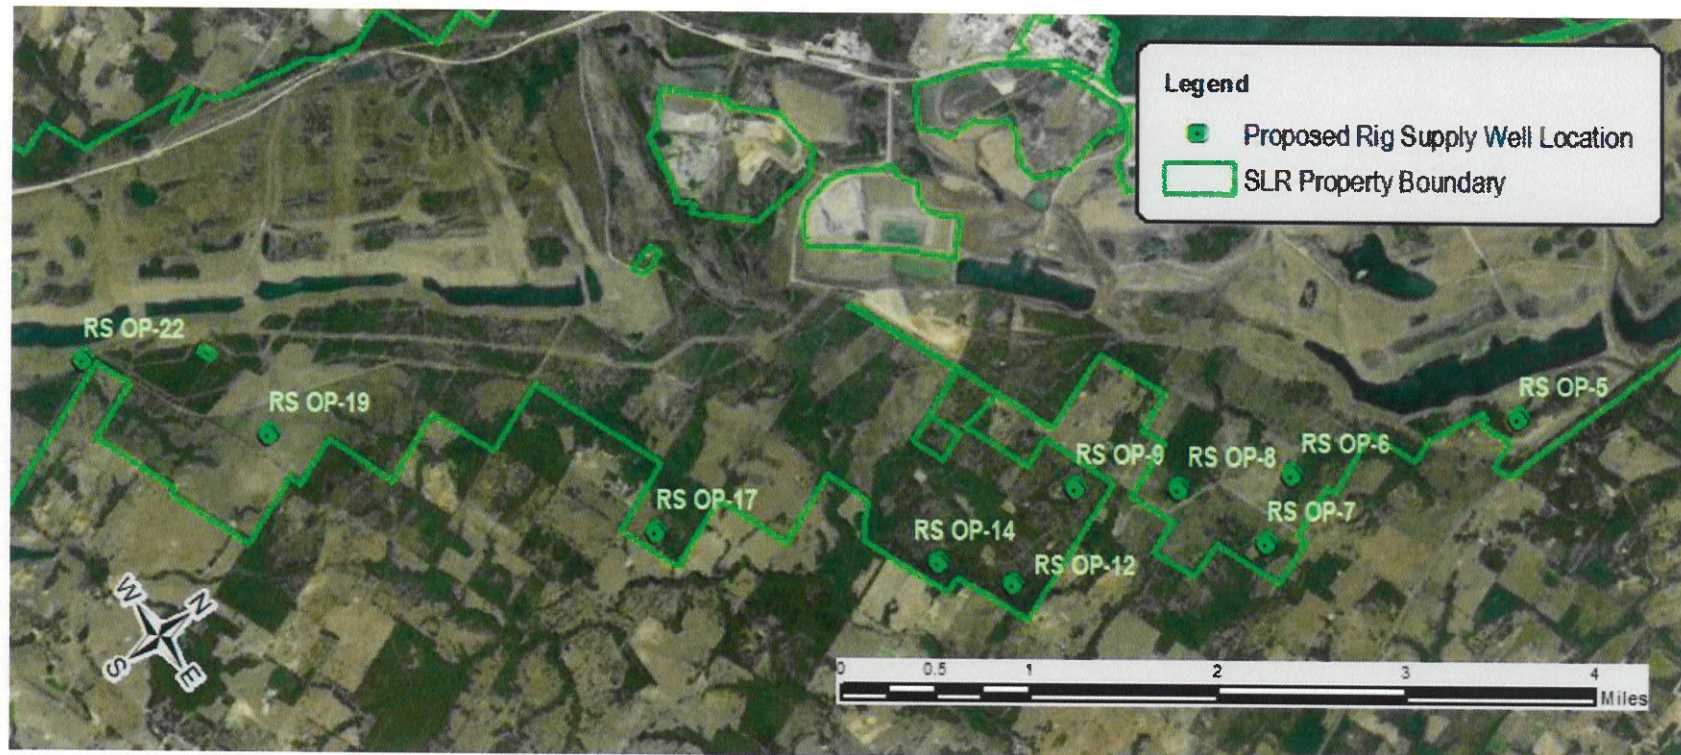

**Well Closure Plan**

The temporary pumping equipment in the rig supply well will be removed upon completion of the permanent production well, and prior to installation of permanent pumping equipment in the approved production well.

The rig supply well closure plan is either rig supply well will be plugged in accordance with POSGCD and State of Texas requirements, or the monitoring program associated with SLR's Operating Permit 0148 will be amended to add the rig supply well as a new, long-term monitoring well.

Notes: \_\_\_\_\_

**Response to Rule 4.1 – Well Spacing Requirement**

The rig supply well is a temporary use well that is to be located directly adjacent the production well approved under Operating Permit 0148. The maximum pumping rate for the rig supply well is 100 gpm. Based on field surveys of the Production Well Location, no wells currently exist within 250 feet of the proposed rig supply well. The rig supply well is located more than 250 feet from the SLR property boundary, and for reference the permanent production well meets all POSGCD spacing requirements and is permitted for an instantaneous maximum rate of 1,000 gpm. The rig supply well location will be selected near the approved production well location based on the footprint of the drilling rig and other equipment, and logistics of site access and drilling operations.

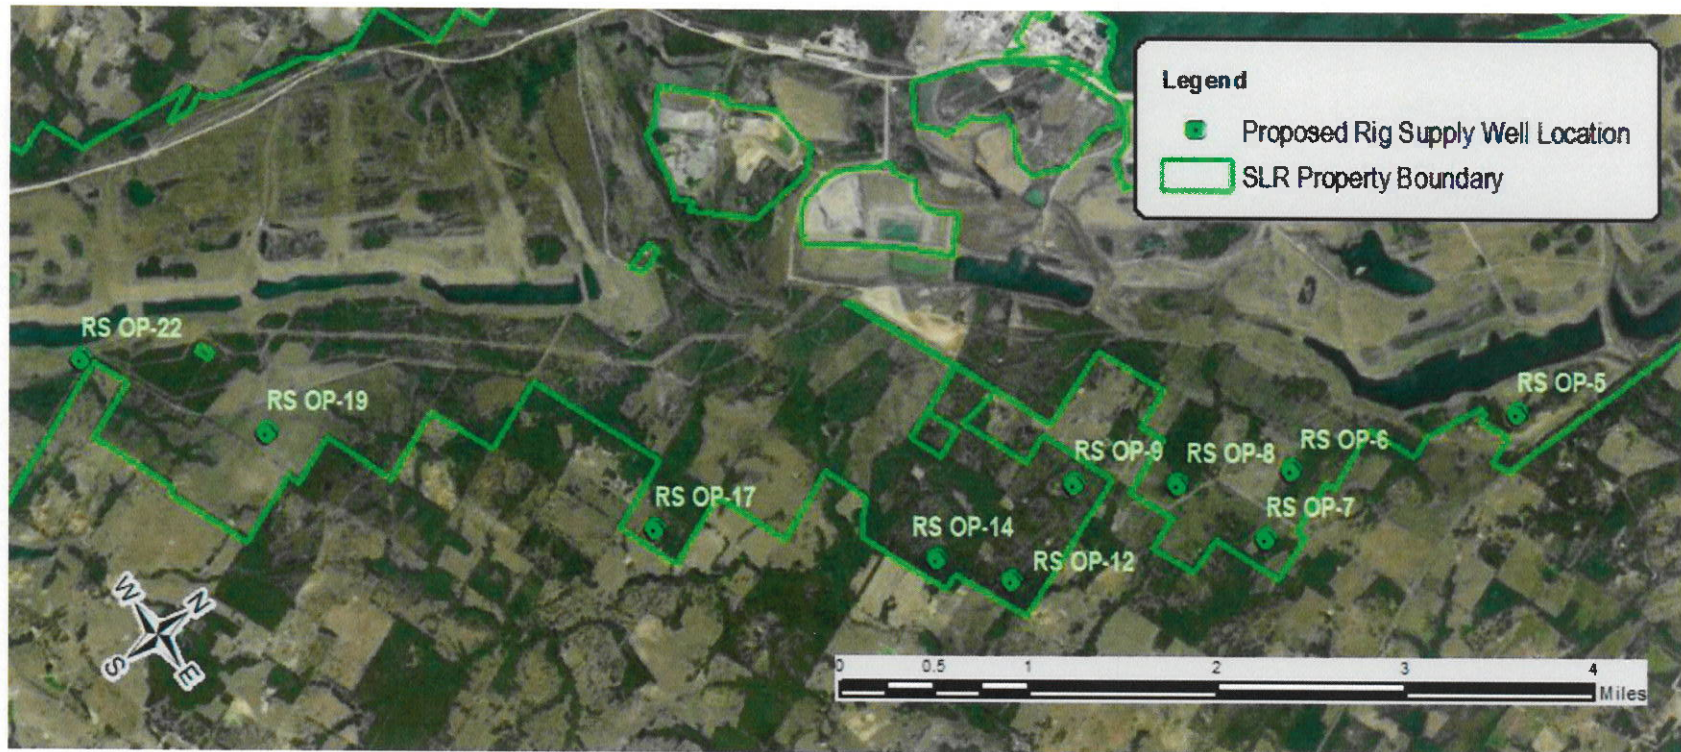

**Well Closure Plan**

The temporary pumping equipment in the rig supply well will be removed upon completion of the permanent production well, and prior to installation of permanent pumping equipment in the approved production well.

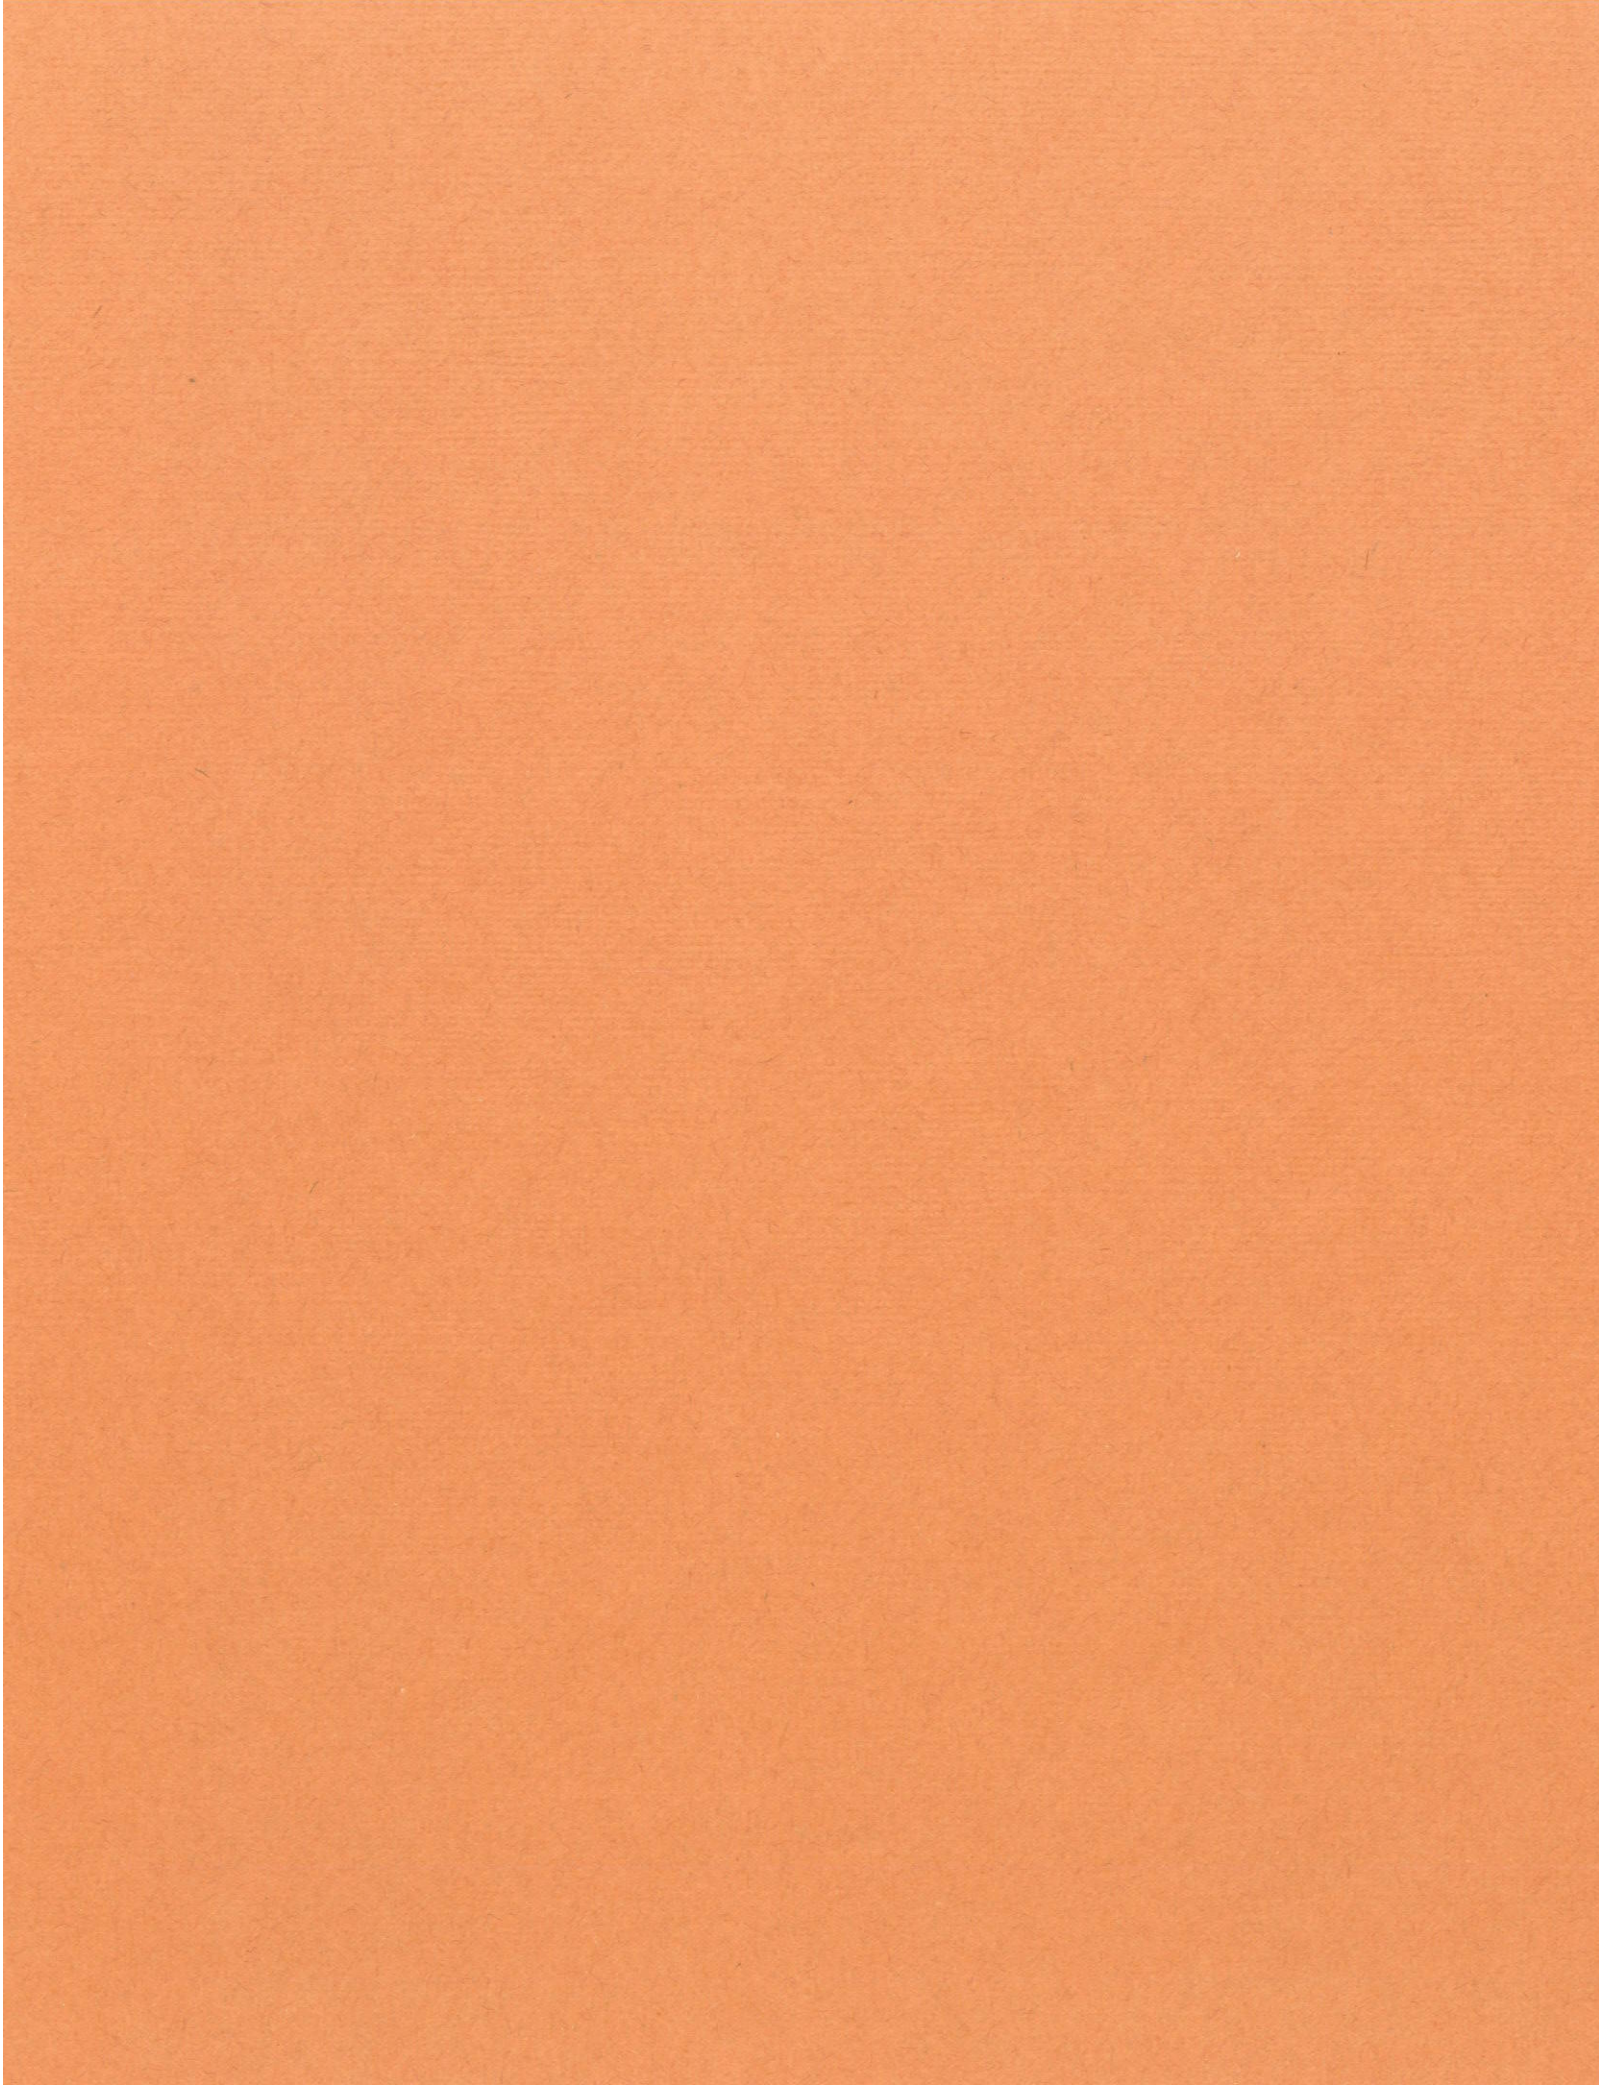

The rig supply well closure plan is either rig supply well will be plugged in accordance with POSGCD and State of Texas requirements, or the monitoring program associated with SLR's Operating Permit 0148 will be amended to add the rig supply well as a new, long-term monitoring well.
