RE: SLR Property I, LP – Application for Temporary Rig Supply Well

Dear Gary:

INTERA has completed a review the SLR Application dated May 31, 2022 for ten temporary Rig Supply. INTERA considers the application to be administratively complete.

The application is for eight Simsboro wells and two Calvert Bluff rig wells. The rig wells are to support the drilling of the Simboro production wells for Permit 0148. All wells will used less than 500,000 gallon per day and have a maximum pumping rate less that 100 gpm. All wells meet POSGCD well spacing criteria for the nearest well and the property boundaries.

SLR requests that the POSGCD waive the requirement of a public hearing or the applications.

The well closure plan for all ten rig wells states that the wells will be plugged in accordance with POSGCD and State of Texas Requirements, or the monitoring program associated with the SLR's Operating Permit 0148 will be amended to add the rig supply wells as a new. long-term monitoring well.

INTERA recommends that the District considers converting the rig well supply wells to monitoring wells. If the Districts is interested in using the wells as monitoring wells, INTERA recommends that a written agreement between POSGCD and SLR be in place prior to the District's approving the permit. The written agreement should include the type of monitoring equipment to be installed (if any), the frequency of monitoring, the schedule for delivery the data, well maintenance, and well access.

Sincerely,

Steven Young, PG PE
